Ranch Story

We have Express Ranch bulls on black Cows ... This year we have a few Charolais calves as we had a white bull get on us last summer. Mostly we always have black calve and black motts some Baldies. We wean our calve October 1 every year. Two rounds of modified live lepto, wormer, Cavalry 9, and cut all bull calves. We put them on a medicated grain mix for 30 days and then a free choice creep feed for 30 days. We usually sell about 30 the first two weeks of December. All our calve come in with our ranch ear tags and our phone number as well. We will not hide anything. I've bought bad cattle before, so I know how that feels!

Feed

Frontier Trading special mix of medicated starter feed for 60 days and Bermuda round bail hay, also still bermuda grass grazing.

Health Program

Vaccination: LV5, Safeguard wormer, Ivomec Pluse, Ivomec pour on, Microbiota gut support, blackleg, (all heifers Lutayse).

Age / Source Verified: Yes

Listing Notes

We put our calves on a special mix with tetracycline added to grain mix. This mix has been vetrimaaran approved and designed. This group is on this feed for 60 days. We move them up to 3% of the average body weight after 30 days. Calves stop bawling is two days when on this feed. Didn't have any sickness with this group.
