Ranch Story

Our cattle program is built around quality genetics, sound management, and producing calves that are ready to perform. We use registered Angus bulls from Top Notch Angus and Sexton Genetics, selecting genetics that add quality, consistency, and performance to our calf crop. Calf health is a priority from the beginning. All calves have been vaccinated twice with CattleMaster Gold and Bar-Vac 7, giving them a solid start and preparing them for the next stage of production. All bull calves are knife cut. From proven Angus genetics to a strong vaccination and management program, we work to produce healthy, uniform calves with the genetics and foundation to go on and perform for the next owner.
